

Measuring Guide

For Window Blinds

1. Measure with **Steel Measuring Tape**
2. Unit of Measure is **inches/feet**
3. Start Measuring with **Width** from Left to Right
4. Measure **Height/drop** from Top to bottom.
5. Decide How You Want to Mount Window Blinds.
6. Either Inside Window recess/frame or Above Window like curtains.

Check the instructions below

What is Width and Height?

Actual window size e.g. size 48 x 48

There are Only Two Ways to Mount Window Blinds

1. Inside Mount
2. Above Mount

Check Window Depth for inside mount
(The Space left after Glass/Grill)

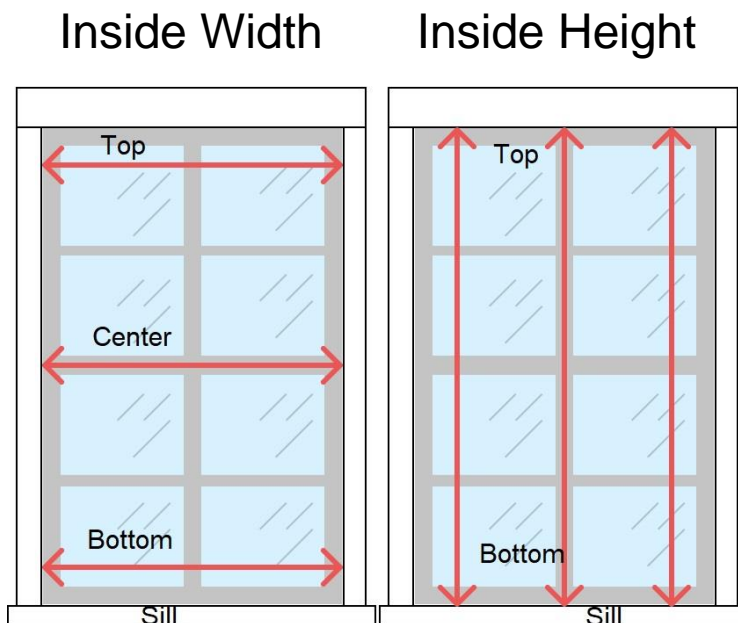

Minimum depth is required (2.50 inches)
This space in above picture is ideal to inside mount

If there is no space of 2.50" left after glass/grill measure for above mount
Check measuring guide below

How to Measure for Inside Mount

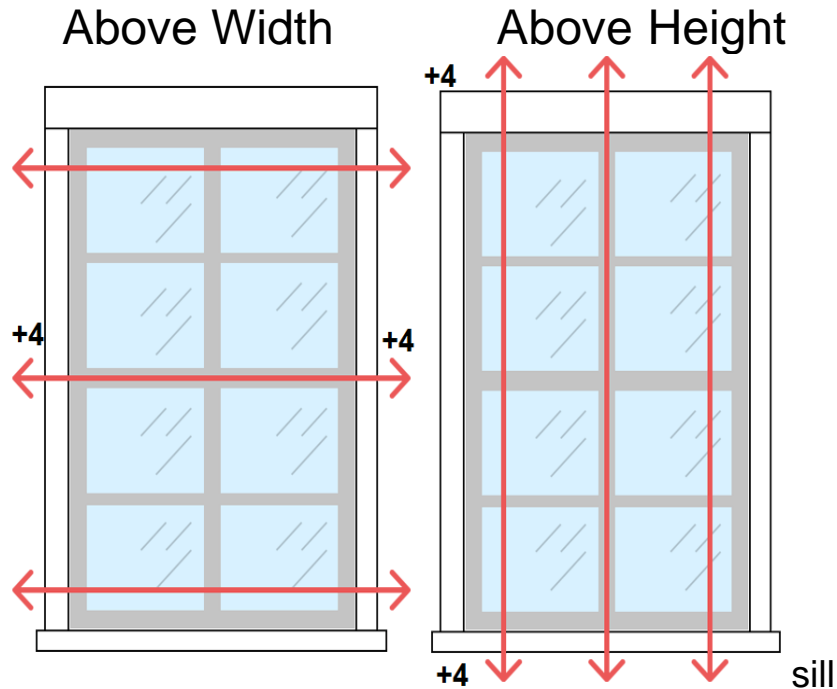

Measure inside window width on top and center points of your window e.g. 48" on top and 47.75" on center. Smallest 47.75 is your inside width

Measure Inside window height from top to bottom/window sill

Note =Width should be same on top and center points. send us smallest width if there is difference of widths. For inside mount don't add or deduct in measurements. If your window opens in your room not outside go for above mount. Also If there is little depth 2.50 < measure for above mount.

How to Measure for Above Mount

Add 8 inches extra in width e.g. 48 inside width will become 56

Add 8 inches extra in Height e.g. 96 inside height will become 104

Note = Total extra should be 8 inches in Total width & Height from actual window size

Note = check for obstructions, left, right, top and bottom sides of your window. e.g. wardrobe, wall mounted wooden shelves, racks, shelves, cabinets, or corner window with wall. Center window with cabinets e.g. in kitchens. There should be at least 5 inches “open space” left, right, top and bottom sides of your window
